

Data Access Governance (DAG)

See who can reach sensitive data and why, then right-size access across cloud, SaaS, and On-Prem in minutes.

End Access Chaos with Identity Context

Lightbeam Data Identity Graph links every permission to the person and business context it touches. You see who can open which files, why they have that path, and the risk it creates. From one console discover open, excessive, cross-team, and external access across cloud, SaaS, and On-Prem. Launch reviews, prove least privilege, and fix fast with policy automation that revokes access on violation. Govern all files, not just sensitive ones, apply file-type controls, and set folder-level policies for SMB File Shares.

"Lightbeam provides the utmost peace of mind for our team, because we know it's doing all the hard work for us behind the scenes."

David Eddings, President, InfoObjects

90%

Reduction in manual data security and privacy operations

75%

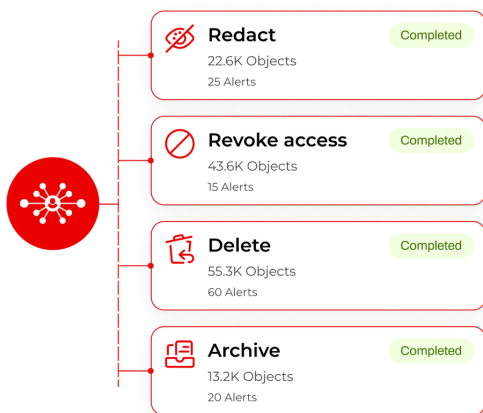

Faster remediation of risky data access

80%

Less time needed to prepare audit reports

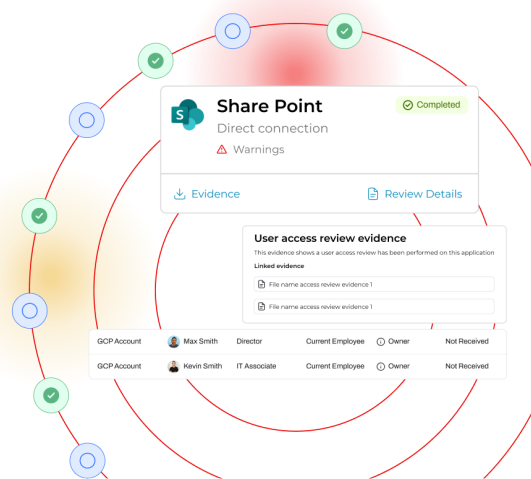

Right-size access without the noise

Expose open, excessive, and inherited permissions in one view. See direct, nested, and external paths, then fix with policy or owner review.

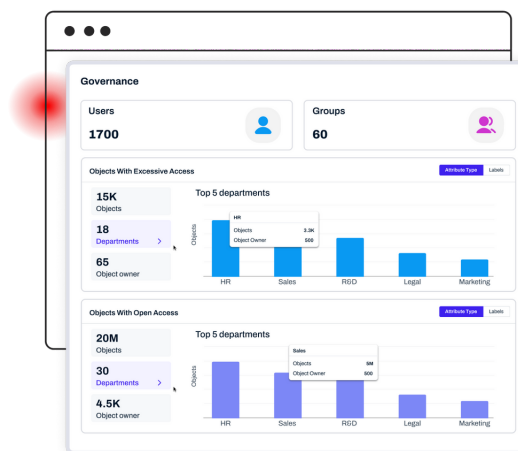

Prove least privilege on demand

Run drive, folder, group, or user reviews. The Data Identity Graph shows whose data sits behind each entitlement. Export CSVs and revoke access fast.

Automate control across every file

Govern all files, not only sensitive ones. Enforce file-type rules, set SMB folder policies, and revoke risky access across cloud, SaaS, and On-Prem.

Data Visibility

Know **WHAT** data you have across Cloud, SaaS and On-prem apps.

Data Identity

See **WHOSE** data you have, **WHERE** (customers, employees, vendors).

Data Access

Enforce policies around **WHO** should have access to **WHOSE** data.
