

Data Classification

Classify and tag files. Link files to owners and access. Govern risk across cloud, SaaS, and On-Prem without busywork.

Classify with Context and Identity

Start with context. Lightbeam Data Identity Graph links each file to the person it represents and who can open it. Classifiers scan cloud, SaaS, and On-Prem for PII, PHI, PCI, code and contracts. Labels apply natively so Purview and Google enforce policy without manual rules. Bring your own categories or use built-in ones. Risk Scores and Lens surface hotspots. Access Governance covers all files. Coverage includes Databricks, Google Cloud Storage, Confluence, and SAP HANA.

"We chose Lightbeam because it offered us granular control and unique insights into our sensitive data—including the ability to figure out the identities associated with sensitive data—something no other solution matched."

David Hanna, IT Security Specialist, Veridian Credit Union

90%

Reduction in manual data security and privacy operations

75%

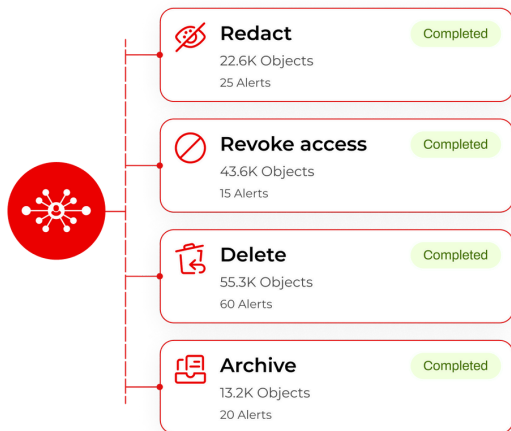

Faster remediation of risky data access

80%

Less time needed to prepare audit reports

Find What Matters, First

Scan cloud, SaaS, and On-Prem. Classify with context.
See owners and access paths so blind spots shrink and
data gets tagged right the first time.

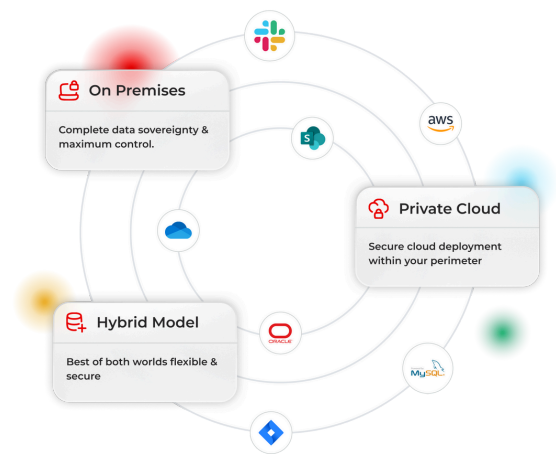

Prove Compliance, Cut Work

Sync labels to Purview and Google. Generate RoPA
and audit reports. Risk Scores and Lens flag hotspots
so teams cut review hours and meet PCI, GDPR.

Control Access with Confidence

Tie labels to entitlements. The Data Identity Graph shows
who can open files. Revoke risky links or open shares in
SharePoint and SMB file shares.

Data Visibility

Know **WHAT** data you have
across Cloud, SaaS and On-
prem apps.

Data Identity

See **WHOSE** data you have,
WHERE (customers,
employees, vendors).

Data Access

Enforce policies around
WHO should have access to
WHOSE data.
