# Lightbeam

Data Security Posture Management (DSPM)

Discover shadow data, map risk to people, and remediate fast across cloud, SaaS, and On-Prem.

See Every Risk. Act Fast. Prove Control.

Lightbeam strengthens DSPM by connecting sensitive data to the people it represents, so you can see whose data you hold and how it is exposed. Coverage spans cloud and SaaS, including Amazon S3 and Salesforce, and extends into AI assistants like Microsoft Copilot where sensitive data can be over-shared in an instant. Policy workflows move you from discovery to action by automating remediation and routing changes through approvals, reducing overexposure while producing audit-ready reporting.

"We chose Lightbeam because it offered us granular control and unique insights into our sensitive data, including the ability to figure out the identities associated with sensitive data, something no other solution matched. Lightbeam's responsiveness and innovation were the primary reasons we selected Lightbeam over Varonis."

David Hanna IT Security, Veridian Credit Union

90%
Reduction in manual data security and privacy operations

75%
Faster remediation of risky data access

80%
Less time needed to prepare audit reports

End Blind Spots Across Your Data

Find shadow data across cloud, SaaS, and On-Prem. Classify sensitive records with AI and map them to people and owners using the Data Identity Graph.
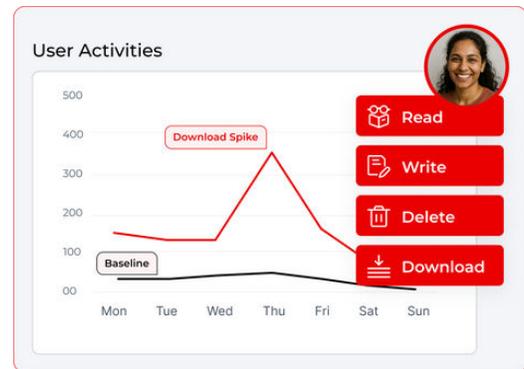

Turn Findings Into Fixes

Use risk scoring to rank hotspots and focus effort. Launch Access Review to right-size permissions, then use policy playbooks to revoke excess access.

Stop Breaches Before They Spread

Detect ransomware spikes and insider drift in real time with UEBA. Govern Microsoft Copilot prompts, responses and files so regulated data stays safe.

Data Visibility
Know WHAT data you have across Cloud, SaaS and On-prem apps.

Data Identity
See WHOSE data you have, WHERE (customers, employees, vendors).

Data Access
Enforce policies around WHO should have access to WHOSE data.
